

ASH REINVENTED

OUR STORY

At Ashcor, we're fascinated by ash. As our name suggests, ash is the core of our business. We develop innovative means to repurpose ash, enabling it to play a vital role in solving infrastructure and environmental challenges. We are a trusted ash expert and a pioneer in our industry.

Ashcor Technologies Ltd. was established as a fly ash marketing company in Alberta in 1998 and is the largest independent marketer of fly ash in Western Canada. We are at the forefront of the industry, advancing the way we source fly ash by developing a leading-edge technology to beneficiate ponded and landfill coal ash. Over the past two decades, Ashcor has expanded its marketing territory to encompass Western Canada, as well as the Northwestern United States. This growth has led to the creation of our American division, Ashcor USA Inc.

As a subsidiary of the ATCO Group of Companies, we possess an intimate appreciation for the concerns of power producers. For many years, ATCO held a portfolio of coal fired electricity generation assets. Ashcor was born from a need to manage and maximize by-product from power generation.

A TRUSTED ASH EXPERT

For over 20 years, Ashcor has reliably supplied premium fly ash for concrete and oilwell cementing applications.

Declining coal fired generation is causing regional fly ash shortages. Anticipating this shift, Ashcor has engineered a commercial solution that processes previously stored coal ashes into a high-grade pozzolan for use in concrete. Our transformational Reclaimed Ash Management (RAM™) technology delivers a consistent, long-term supply of high-quality ash.

Ashcor is focused on the reclamation of comingled fly and bottom ash from ponds and landfills for beneficial use, while continuing our legacy as a trusted fly ash marketer.

WHAT WE STAND FOR

Operating like a family business, our core values set the foundation for building long-term relationships. Ashcor's values of Integrity, Caring, Agility and Collaboration are exemplified in our interactions with each other and with our stakeholders.

OUR PARENT COMPANY

ATCO is a diversified \$22 billion global corporation that delivers service excellence and innovative business solutions across several platforms, including electricity generation, natural gas distribution and transmission, energy storage, industrial water, retail energy and permanent and temporary modular structures. ATCO serves more than two million customers around the world, providing integrated, forward-thinking solutions.

We are dedicated to the future of fly ash supply, life beyond coal-fired generation, and the mitigation of environmental pressures surrounding ash management.
