Premium Trailer Mounted Units

Introducing ATCO's range of premium trailer mounted units.

They are tough and will follow you anywhere across the country. They are comfortable and will make you feel right at home, wherever your work may lead you.

Our premium trailers are crafted with heavy-duty suspension, fully composite panels with aluminium frames, and advanced electricals.

Fibreglass expertise

Our trailers are built by legendary award-winning boat builders, The Haines Group. With over 50 years' experience in fibreglass manufacturing, you can expect only first-class quality for your ATCO trailer. Fibreglass combines versatility, durability and strength. It makes our trailers non-corrosive.

The roof and wall panels of our trailers consist of welded box section aluminium frames, insulated with a fire-resistant expanded polystyrene foam lined with fibreglass. This ensures a lighter, stronger structure that is cooler in summer and warmer in winter.

With such an extensive experience you can be assured that everything in an ATCO trailer is built to the highest quality and is completely "ship shape".

Cruisemaster coil suspension

The Cruisemaster independent Coil suspension system is the modern day answer for economical load protection and towability. Softer spring rates help protect both the trailer and its contents.

Hybrid chassis

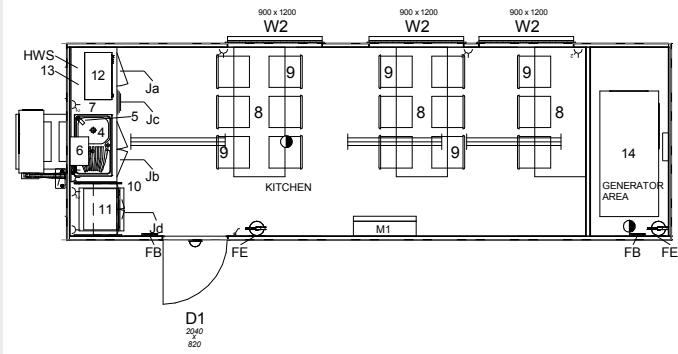

Built tough for maximum performance using full length hot dipped galvanised steel and a no compromise attitude, to give you an undercarriage that is virtually bulletproof.

Last, but certainly not least, ATCO trailers are proudly designed and made in Australia.

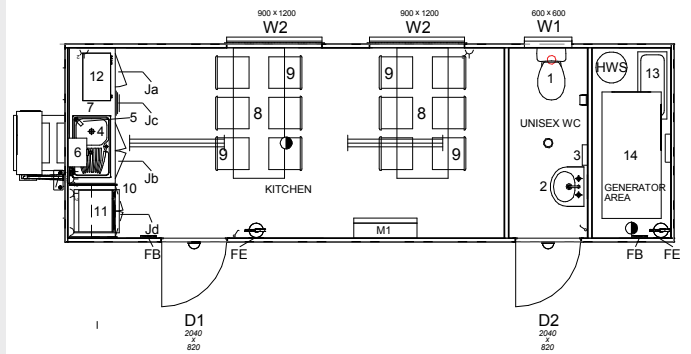

ALWAYS THERE. ANYWHERE.
